Experience

Senior Software Engineer, MBL HighTech — 2024 – Present

- Collaborated on the backend and frontend of Teamforce (CRM, Clientzone, PWA, and Affiliate) with React, NestJS, TypeScript, JavaScript, Node.js, Express, and Postgres. Teamforce's CRM is the brokerage's central console, integrating liquidity providers, VoIP, e-KYC, the trading platform, and payments, with a client area and IB and affiliate management.
- Collaborated on the WhatsApp Solution and the Telegram Solution on that same stack, tracked with Git and Asana. Those channels let agents message clients from the CRM, and the messages are archived on the client record.

Program Manager & Leader (Volunteer), The Salvation Army Division, San Diego, USA — 2023

- Led faith teaching and camping for kids aged 7–16, running campfires, archery, swimming, axe-throwing, and musical performances, which built teamwork, creativity, and leadership.

Senior Software Engineer, Incentive Games — 2021 – 2023

- Contributed backend and frontend for Sportsbook and for Flight-Man, a real-time multiplayer web game, with React, JavaScript, Java, MySQL, and RabbitMQ on Linux, working with cross-functional teams to deliver those products.

Lead Software Engineer, Homie — 2016 – 2020

- Pioneered the Homie app and built its user interfaces, advanced search, and interactive maps. Homie is a licensed real estate brokerage serving Utah and Arizona: buyers browse homes for sale, schedule tours, and make offers, and sellers can list with a flat fee. Homie states that this saves sellers thousands per transaction compared with a 3% listing commission.
- The work was recognized by SiliconSlopes, and the app won a hackathon.

Software Engineer, Andela — 2015 – 2020

- Built iReaction, a public Java library for document management; Voluminotes, an Android note-taking app; and iWorkout in Kotlin and Java, which plans, reminds, and counts daily pushups and shows a monitoring report.
- Listed on DZone and Stackify as a top Java leader, placed in the top 0.1% of software engineers at Andela, won hackathons, and was featured in Java Edition.

Projects

Keztrip — bus booking app, Abuja
Built the NestJS and PostgreSQL backend and the React and TypeScript admin dashboard. Keztrip lets riders reserve a seat on a scheduled route, pay, and follow the bus on the map, including school runs, event trips, and private bus hire. keztrip.com

Teamforce, WhatsApp Solution, and Telegram Solution — MBL HighTech
Backend and frontend for the brokerage CRM, Clientzone, PWA, and Affiliate, plus WhatsApp and Telegram messaging archived on the client record. teamforcetechnologies.com

Homie — real estate brokerage
User interfaces, advanced search, and interactive maps. Homie serves Utah and Arizona, with home search, tours, offers, and flat-fee listings. homie.com

Earlier: iReaction, Voluminotes, iWorkout
Public repositories: github.com/coach-K/iReaction, github.com/coach-K/Voluminotes-App, and github.com/coach-K/iWorkout.

Skills

Languages	Java · Kotlin · Swift · JavaScript · TypeScript
Frameworks	Spring Boot · React · NestJS · Node.js · Express · GraphQL
Mobile	Android (Java, Kotlin) · iOS (Swift)
Web	React · Vite
Databases	MySQL · Postgres · MongoDB · Redis · RabbitMQ
Tools	Git · Jira · Asana · AWS
AI tools	Cursor · Claude · ChatGPT · Gemini · Grok

Recognition

- Listed on DZone.com and Stackify.com as a top Java leader. Featured in Java Edition and in Evolution of Java Edition.
- Open source: merged pull requests on github.com/andela/helpmebuy (navigation icon fix, user profile management, and a hotfix), and to the NestJS official docs (nestjs/docs.nestjs.com#3615: file-upload memory buffering vs disk storage and Multer file size limits; merged by NestJS creator Kamil Myśliwiec).
